

Nutrition Management Plan 2017 – 2018

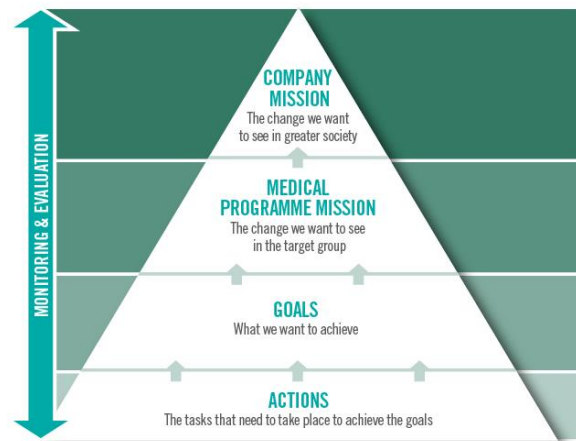

Cochabamba, Bolivia

About the Nutrition Management Plans

This document explains the bigger picture of our projects in Bolivia and how the combined daily tasks of all of our volunteers help us to achieve long term goals. By following Task Lists, our volunteers work towards our Goals, through which we contribute to our Medical Programme Mission which combined with our other projects, helps us to reach our Company Mission.

Here we will lay out the priorities, resources, monitoring tools and evaluation systems used to make our ambition a reality.

Our Resources

<p>Human Resources</p> <ul style="list-style-type: none"> Volunteers are of course our primary resource to achieve our goals. We welcome over 2,300 Medical volunteers per year globally. The staff at our placements support and facilitate our actions Over 600 Projects Abroad staff members provide the structure we need for worthwhile projects. 	<p>Physical Resources</p> <ul style="list-style-type: none"> With over 50 Projects Abroad offices worldwide, there is always somewhere for volunteers to work together and share experiences We provide all necessary materials for medical outreaches 	<p>Online Resources</p> <ul style="list-style-type: none"> Our Volunteer Resources Database shares thousands of ideas among our community Online reports are used to track our projects all over the world Personalised MyProjectsAbroad webpages prepare each volunteer for their Medical project.
<p>Financial Resources</p> <ul style="list-style-type: none"> Funds for all of Projects Abroad's work come solely from volunteer placement fees. These are distributed via monthly budgets, to ensure fair allocation of funds for each destination. Occasionally the Projects Abroad community may send donations directly for a specific placement or project. 	<p>Intangible Resources</p> <ul style="list-style-type: none"> The good reputation of volunteers in local communities is what makes our work possible. This reputation has been earned over years of dedicated volunteer contribution. This is supported by the combined knowledge of our extensive staff network. 	

Our Nutrition Management Plan Goals in Bolivia for 2017-2018

The following goals have been selected from a list of six by our local staff and partners. Each placement and volunteer may be working on one or more of these goals, in line with our Medical Ethics Policy and taking into account the volunteer's qualifications and level of experience. We arrange workshops, outreaches and assist with independent research projects as a means of working towards each of these goals.

Improve Maternal, Infant and Young Child Nutritional Status

The UN's third Sustainable Development Goal (SDG) aims to ensure healthy lives and promote wellbeing at all ages. Adequate nutritional intake during the early stages of life, starting in pregnancy, sets the foundation for healthy growth and development, improving child survival and long-term wellbeing. It is estimated that one in every three children in Bolivia suffers from malnutrition. It is believed that poverty, poor health systems and the lack of awareness relating to nutrition are all factors influencing the increase of malnourishment in Bolivia. Projects Abroad volunteers work primarily in a nutrition day-care centre to lead awareness campaigns, to provide nutritional guidance to new mothers and create resources for educational and training purposes. Volunteers run cooking lessons for mothers to encourage them to use more local Bolivian foods with high nutritional value.

Improve Nutritional Status Through Improved Basic Hygiene and Food Safety Knowledge

The most common foodborne illness, diarrhoeal disease, causes an estimated 230,000 deaths per year, with 550 million people becoming ill. 40% of these are children under 5 years old. By improving sanitation, hygiene and knowledge of good food safety practices, the risk and effects of these illnesses can be limited, and deaths prevented. Through the work done at the nutrition day-care centre and through our outreach programme, volunteers work closely with community members, with a focus on mothers, to raise awareness of foodborne diseases and educate them on food safety principles as well as their application. Volunteers will assist in food preparation at the centre, run cooking lessons for mothers, as well as help with cleaning the babies' bottles to ensure greater food safety.

Reduce the Incidence, Prevalence and Complications Associated with Obesity and Non-Communicable Diseases

Obesity is a growing health concern in developing countries and is a major risk factor for many Non-Communicable Diseases (NCDs), including diabetes, cardiovascular diseases and cancer. NCDs are estimated to account for up to 59% of deaths in Bolivia. Fast and processed foods are being increasingly consumed. Lifestyle interventions, including nutrition and physical activity, are effective at reducing the burden of disease and increasing quality of life. Through our Nutrition project, we encourage local communities to improve their lifestyle choices. Volunteers help conduct evaluations and provide nutritional counselling as well as run workshops around healthy nutrition. Community outreaches and cooking lessons encourage the consumption of Bolivian products with high nutritional value.

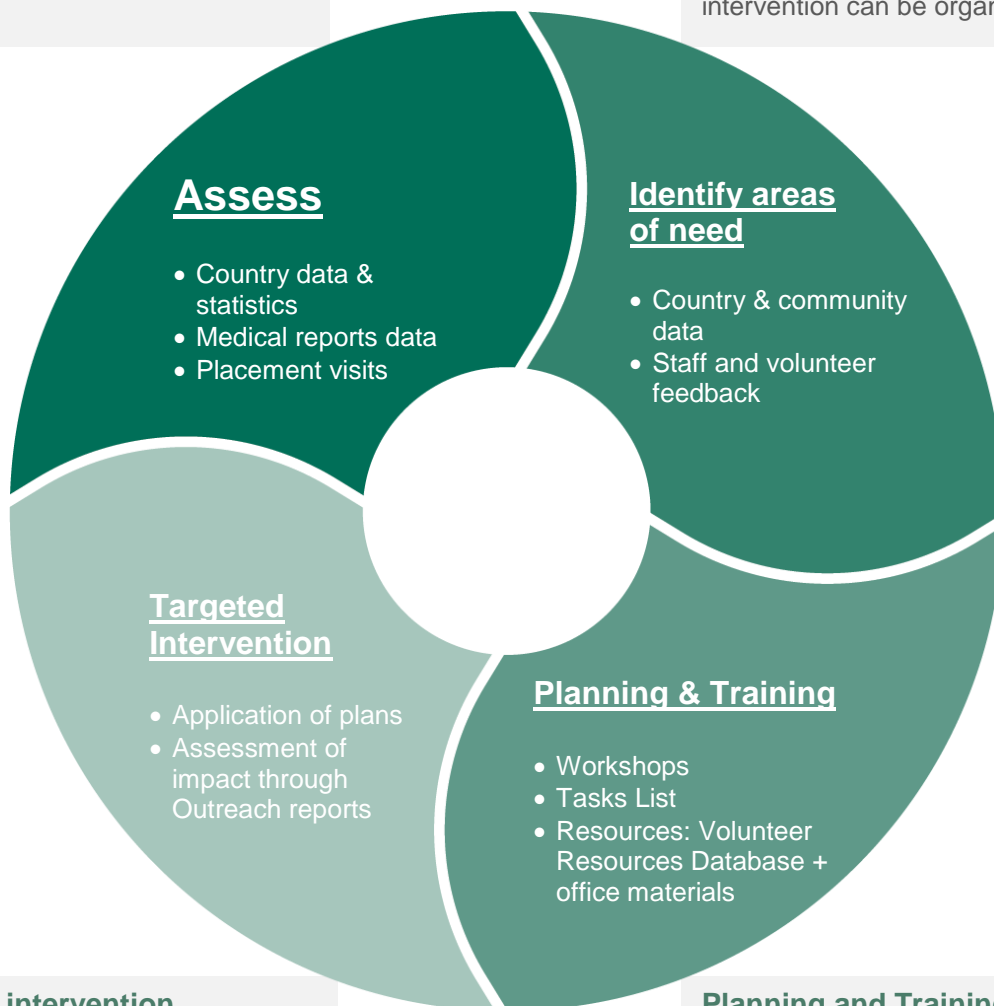

How we achieve our goals

Assessment

Through specially designed reports and structural research, we pinpoint locally relevant issues. This information will help us determine the methods and areas for intervention within local communities.

Identify areas of need

Through research and data gathering, we can identify the areas that most need human or material resources. This helps volunteers to know which healthcare topics need further education as well as which ailments are most affecting local communities, so that targeted intervention can be organised.

Targeted intervention

Through our steady stream of volunteers year round, we are continuously targeting the areas of need determined by our data. Although a 4 week volunteer might not see a tangible difference in the time they are there, we are able to show that over longer time frames each and every volunteer contributes to long-term, sustainable impact.

Planning and Training

Based on the areas of need we create Task Lists, workshops and community outreaches to direct our impact to where it is most needed. Resources are designed by volunteers and these are shared on the Volunteer Resources Database.
